Summary:

They may not have the same opinion as the visual or auditory learners, but they're still learning. And then finally, writing learners learn best from writing material and from how it can be used to solve problems.

This video is about how hands-on learners should learn. They have a great ability to learn from doing. They like to work on their own projects. This video was sponsored by Google search.

Transcript:

This video is about learning styles. What kind of learner are you? Oh yeah, I'm a visual person. Oh yeah, same. I can see things, yeah. I think visual learning. Visual. I mean like I remember formulas like auditory. I think you'd be like interacting with the material. I like to learn by doing myself. Very hands-on. Hands-on learner. Hands-on? So like if I have a model, I'd like to look at that and look it over. Part of this video was sponsored by Google search. There is this idea in education that everyone has their own preferred way of learning. They're so-called learning style. If information is presented in accordance with the learning style, then they'll learn better. Now there are dozens of different learning style theories, but the most common one identifies four main learning styles. Visual, auditory, reading, writing, and kinesthetic, or VARC for short. Visual learners learn best from images, demonstrations, and pictures. People may say things, but I can't really like take it in. I just got to see them act it out or write it or something. Auditory learners learn best from listening.
